A. Game Picture

B. Machine Connection Introduction

1. This server board can support 1~50 machine connection. It needs to buy a server board, which support the animation on the big screen.
2. The server board is connecting to the hub by network line; other boards (ID board 1~50) use network line to link to hub.
3. Server board can change the settings of every single ID board.
4. Server can check total accounting and every single ID machine's accounting.

C. System Setting

Press **【Setting SW (20A)】** to enter MENU and use these function for **【BET1】** Previous **【BET2】** Next **【AUTO】** Select **【START】** Return.
